VISION AND VALUES

Dais Software has been recognized as a company dedicated to providing software solutions that meet the expectations for functionality and quality.

dynamics. Innovation, research and improvement to always keep up with contemporary business and technology.

agility. Solutions that flexibly follow business priorities and changing requirements to support customer's competitiveness.

integration. Connected interoperable systems that integrate optimally to complex IT environments.

stability. No compromise to performance, availability and security of IT systems.

AREAS OF SPECIALTY

Dais Software focuses on medium to large scale projects in **E-Business, E-Channels, Security and Integration for the Financial Services Industry**

E-Business

eBank.net - company's core business - Enterprise Multi-channel Solution for Online Banking, Finance and Payments

eBank.net covers Internet Banking and Mobile Banking Channels and offers complete feature sets for banking and financial services for individual and business customers, with rich user experience on contemporary Web and mobile trends. eBank.net functionality includes single view of bank accounts and transactions information; full range of online fund transfers; loans origination and operations; online and offline bill presentment and payment (including a complete payments and collections management system); personal finance management, e-invoicing; customer investment portfolio information; e-commerce features with option for a standalone 3D-secure-compliant payment portal. Advanced software architecture, built-in industry standards, such as PKI for security and XML for interoperability and continuous introduction of latest technology ensure long product lifecycle. eBank.net gained stability and fine tuning in large-scale live systems operation.

Other frameworks

Web Content Management. Framework for dynamic web site content management of large corporate sites. Key features include flexible site content edition and open integration of custom web applications into the graphical user interface.

Call Center. Call Center agent applications, voice and fax applications based on integration to leading CTI vendors.

Interactive Messaging. Frameworks for messaging and distribution channels such as SMS and e-mail including high-performance notifications engine and bulk SMS system.

Security

PKI-based security framework. Platform for enrollment and management of digital certificates with interface to integrate to browser, desktop or mobile clients.

Authentication and Fraud Protection. Frameworks for OTC (one-time codes), based on VASCO technology and mTANs for authorization and protection of online systems; transaction monitoring tools.

Integration

Enterprise Application Integration. Interoperability and complex data exchange platforms based on SOA and Web Services.

Custom Development Services

Dais Software designed, developed and integrated a number of applications solving specific business problems of its customers thus broadly enhancing its know-how and solutions offering for financial industry.

COMPANY ADVANTAGES

Dais Software has built a reputation of a leader in its lines of business.
